Free Anatomy Flashcards

Physiology is the study of the function of body parts and the body as a whole. Some specializations within each of these sciences follow: Gross (macroscopic) anatomy is the study of body parts visible to the naked eye, such as the heart or bones. Histology is the study of tissues at the microscopic level.

---

Anatomy and Physiology Study Guides and Reviewer - Nurseslabs

Anatomy and physiology are perhaps the most fundamental areas for a nurse to study. Anatomy is the area of study in between biology and medicine that considers the structure of the body. Physiology is the scientific study of how the body and its organs and cells work. Understanding the location of parts of the human body is critical.

### What Is Anatomy and Physiology?

The study of the different parts of the body, what they do, and where they're located, constitutes anatomy. Think of it as a kind of geography of the human body. Physiology is the study of how all the different organs, muscles, bones, and every other part of the human anatomy work together to sustain life and health.
