~~Urinary System Anatomy and Physiology: Study Guide for Nurses~~

The urinary system consists of the kidneys, ureters, bladder, and the urethra. The kidney consists of millions of functional units called nephrons. The urinary system removes wastes from the body and regulates blood volume and blood pressure. It also controls the levels of electrolytes and metabolites in body fluids and regulates blood pH.

~~Quiz: Urinary System~~

The renal system, which is also called the urinary system, is a group of organs in the body that filters out excess fluid and other substances from the bloodstream. The purpose of the renal system is to eliminate wastes from the body, regulate blood volume and pressure, control levels of electrolytes and metabolites, and regulate blood pH.

~~chapter 24 anatomy physiology urinary system Flashcards ...~~

dispose N waste and excretes excess ions as urine; filter the blood (regulate volume and chemistry makeup); maintain fluid, electrolyte, salt, acid and base balance; produce hormones; rbc production and enzymes that regulate blood pressure, converts Vitamin D to a more active form.
